

Development phase

Relevant solutions: Strategy, Governance, Ethics, Enterprise Risk Management, Resettlement, Social Management, Environmental Management, Health and Safety Management, Sustainability Management, Compliance, Legal Register.

During development IsoMetrix will help you to:

- identify all safety hazards and ensure that the risks inherent to these are mitigated
- record and investigate all incidents, injuries, near misses and non-conformances
- analyze trends so that effective preventive and corrective measures can be put in place
- assess all environmental aspects and impacts
- carry out regular audits and inspections
- fully manage all aspects of resettlement: assess compensation, manage grievances, begin work on livelihood restoration, human resource development of the local communities and the workforce, as well as local content management
- access, in plain English, all sections of all laws, by-laws and codes that need to be complied with, allowing you to assess your levels of compliance and rate the effectiveness of your controls

Production and Operations phase

Relevant solutions: Strategy, Governance, Ethics, Enterprise Risk Management, Resettlement, Social Management, Environmental Health and Safety Management, Occupational Health and Hygiene Primary Healthcare and Wellness, Sustainability Management, Compliance, Legal Register.

Once the extraction of oil or gas is underway, IsoMetrix will help you to:

- ensure strong implementation of continual improvement measures and achieve compliance with standards such as ISO14001 and OHSAS18001
- monitor adherence to the commitments made in the Environmental Impact Assessment (EIA) and Social Impact Assessment (SIA), as well as the Social and Labor Plan (SLP), thereby assuring the project's license to operate.
- gauge the levels of compliance with these assessments and plans in real-time, greatly reducing the risk of penalty or closure
- generate, in real-time, Sustainability reports in accordance with standards such as IIRC or GRI

- monitor indicators such as energy, water, biodiversity, air quality, surface area change, noise and material flows, allowing for better decision-making, improving efficiencies and reducing costs
- manage the identification and mitigation of any potential health hazards and implement risk based medical surveillance protocols.

IsoMetrix provides integrated occupational health and hygiene management, along with medical surveillance, primary healthcare and wellness and clinic management to ensure your operation has adequate preventive and curative measures in place for occupational health exposure risks.

Decommissioning phase

Relevant solutions: Governance, Ethics, Enterprise Risk Management, Social Management, Environmental Management, Health and Safety Management, Compliance, Legal Register.

During the decommissioning phase IsoMetrix assists you to:

- manage rehabilitation against targets agreed with the government and local community
- manage social responsibility undertakings against targets
- continue to manage all environmental, health and safety risks

Closure phase

Relevant solutions: Governance, Ethics, Social Management, Environmental Management, Compliance, Legal Register.

After decommissioning IsoMetrix assists you to:

- monitor the effectiveness of rehabilitation measures such as reforestation land or improving water sources, building and funding infrastructure and schools, and creating opportunities for new economic growth
- track stakeholder engagements and progress against long-term commitments
- monitor compliance against local and international legislation regarding plant closure

Benefits

IsoMetrix allows you to have a single, integrated solution for managing all disciplines within GRC, reducing complexity, removing the need for integrating different systems and databases, and providing an holistic view of the governance health

of the operation. The sophisticated dashboards, powered by QlikView, allow you to manage by exception through strong trend analysis, identification of outliers, and period against period comparatives.

The flexibility of IsoMetrix allows the solution to evolve as your operation's requirements change, quickly and easily. Such is the agility of the product that it can easily be used to replace the spreadsheets that typically proliferate in any organization with secure, auditable, web-based modules - for a wide range of additional applications including management of training and permits, complaint management, support desk and customer/supplier management, among others.

IsoMetrix works at all layers of your business: strategic, managerial and operational, allowing you to foster a culture of responsibility and continual improvement, with clear visibility of progress against objectives, as well as the status of assigned actions.

Customers

IsoMetrix is suited to both junior and major oil and gas operations, which is reflected in our extensive customer base.

“Corporate governance is concerned with holding the balance between economic and social goals and between individuals and communal goals. The corporate governance framework is there to encourage the efficient use of resources and equally to require accountability for the stewardship of those resources. The aim is to align as nearly as possible the interests of individuals, corporations and society.” Sir Alan Cadbury
